

# **CONTENTS**

| <b>S. No</b> | <b>Title</b>  | <b>Page No.</b> |
|--------------|---|-----------------|
| 1.           | Acquaintance of plant pathology laboratory and equipment's  | 1               |
| 2.           | Preparation of culture media for fungi (PDA) and bacteria (NA)  | 9               |
| 3.           | Isolation of fungal and bacterial plant pathogens. Koch postulates  | 12              |
| 4.           | Study of Oomycetes – fungi  | 15              |
| 5.           | Study of Zygomycotina – fungi   | 20              |
| 6.           | Study of Ascomycotina – fungi   | 22              |
| 7.           | Study of Basidiomycotina – fungi  | 27              |
| 8.           | Study of Deuteromycotina – fungi  | 31              |
| 9.           | Study of diseases symptoms and signs of important horticultural crops, phanerogamic parasites, non-parasitic diseases   | 40              |
| 10.          | Preparation of fungicides – Bordeaux mixture, Chaubattia paste, Chestnut compound and calculations  | 48              |
| 11           | Study of non-systemic and systemic group of fungicides and calculations related to fungicide concentrations (Copper, Sulphur, Heterocyclic nitrogenous compounds, other systemic fungicides etc.) | 51              |
| 12           | Demonstration of virus transmission   | 61              |
| 13           | Methods of application of fungicides, demonstration of seed treatment, soil application, foliar spray and post-harvest treatments of fruits.  | 64              |
